Advantages of Using Fledge Programming Service

Time Saving	Risk under Control	High Flexibility
It will save you a lot of time and effort, including the many hours it would take you to do manual back-testing or write the program yourself through a process of trial and error.	Our technical knowledge and experience has included the development of a large number of customized trading strategies, so we can produce well-documented, clearly written code based on TradeStation® EasyLanguage®.	The fact we are traders ourselves gives us the capability to provide you with a user-friendly program that formalizes your personal trading strategies into an effective automated trading tool.
We can write Excel functions and Visual Basic for Excel for your manual data manipulation.	A first-month maintenance service, with the option to extend it to cover the entire first year.	We specialize in multi-time and multi-market trading.
Analyzing the data obtained from these simulations, we will prepare a report on our conclusions and recommendations and fine-tune the program further to optimize your trading methodology and ensure that it is thoroughly debugged.	We will back-test your strategies with reference to popular trading markets such as EUR/USD, E-mini Standard & Poors Futures (ES) and Gold Futures as well as third-party data such as Hong Kong Hang Seng Index Futures before you use it for real trading.	We offer you a complete range of built-in variables (e.g. stop losses, profit targets, number of contracts and the parameters of technical indicators) which you can modify any time you wish.
Our programming service is fast and efficient. We are always committed to doing things right the first time and to meeting our agreed deadlines, as well as completing projects for the price that we originally quoted.	We will ensure the program's complete confidentiality and security by including data and password protection, source code encryption and a non-disclosure agreement.	We will provide you with clear documentation and discuss the program's design and usage with you at face-to-face meetings.
